Pro-Order Production Inventory Management

Overview:

Pro-Order Production Order Inventory Management Software was originally designed out of necessity within our own radio stations. Currently it is being utilized by stations of all sizes and markets across the globe. The purpose of Pro-Order is to tie the communication together between the Sales Department, Traffic Department and Production Department when it comes to anything production and copy allowing you to effectively manage all of your production needs.

Pro-Order allows your staff to enter their production orders electronically into a central database that all members of your team can access. This provides an enhanced level of accountability through our management interface and specialized reporting functions. Never experience late or missed production again!

Added Benefits:

The purpose of Pro-Order is to bridge the communication gap between departments while increasing accountability and productivity within your station(s). This is done by using a centralized database, an easy to use interface and managerial reporting features. Here are some of the key benefits of Pro-Order:

- Electronically handles everything “Production” within your station(s)
- Easily enter Production Orders into a central database for staff members to access
- Provides managerial reports and information through our user friendly interface
- Applies up to the minute production information to your staff in real-time
- Creates accountability for all commercials to be produced or dubbed by your staff
- Never experience late or missed production again!
